What Does Rebuilding Financial Reports Really Cost?

Most finance teams don't realize how much time (and money) they're really spending recreating reports every month.

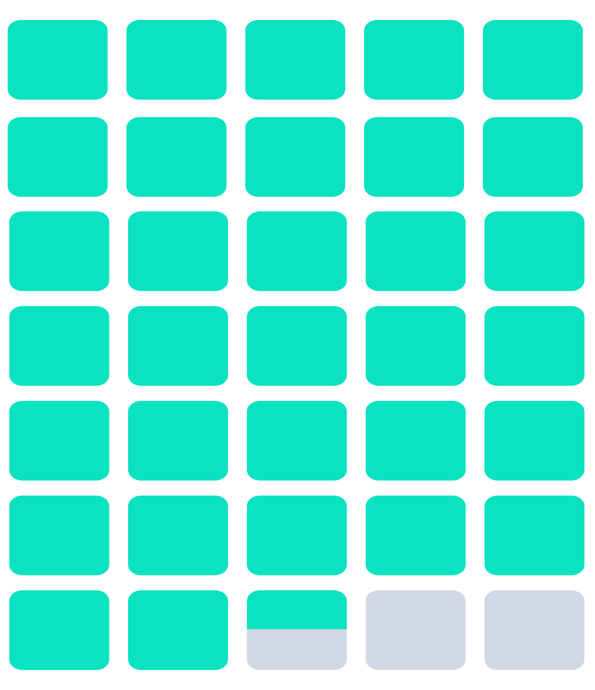
The Weekly Time Drain

5

hours every week

One finance analyst spends roughly 5 hours every week rebuilding recurring reports

= 260 hours a year



Scale It Up

A Finance Team of Five

1,300–1,500

HOURS EVERY YEAR

That's nearly nine months of one full-time employee's work.

The Dollar Figure

What Does That Cost?

$60/hr	×	1,500 hours	=	$90,000
$80/hr	×	1,500 hours	=	$120,000

Per year. And that's only the labor cost.

The Hidden Costs

Labor is only part of the cost.

What Finance Wants To Be Doing

Today's Workflow	Where Finance Adds Value
Exporting CSVs	Analyzing trends
Copy / paste	Meeting with leadership
Formatting	Reading live dashboards
Checking formulas	Driving strategy

Finance teams should spend more time analyzing reports than rebuilding them.

The Solution

TOMORROW

NetSuite > ExtendInsights Financial Reporting >

Live Excel Reports > Refresh > Analyze > Done

Build Once. Refresh Any Time.

Instead of rebuilding reports every single month.
See how much reporting time your team could reclaim.
